

Why should XM be allowed to offer local news, weather, and traffic?? More like why shouldnt they!! If I can turn to a channel and instantly get the newest weather report during a storm, not waiting for a local station to play 3 or 4 songs, then play 3 minutes of ads, then talk about the weather for 5 or 6 seconds. If it's a bad storm I want to hear everything about it! Not just hey folks, it's raining out!! It seems that XM has a superior product, since the NAB is so worried about competition. Let me tell you XM is the only thing I listen to in my car, in my house or wherever I am. They offer much better programming, and I love the traffic and weather when I travel. Dont punish XM for having the better product, make the local broadcasters catch up and offer a product that people want to listen to again.
